

Caller ID Wiring Configuration

4-Line Caller ID Wiring Examples

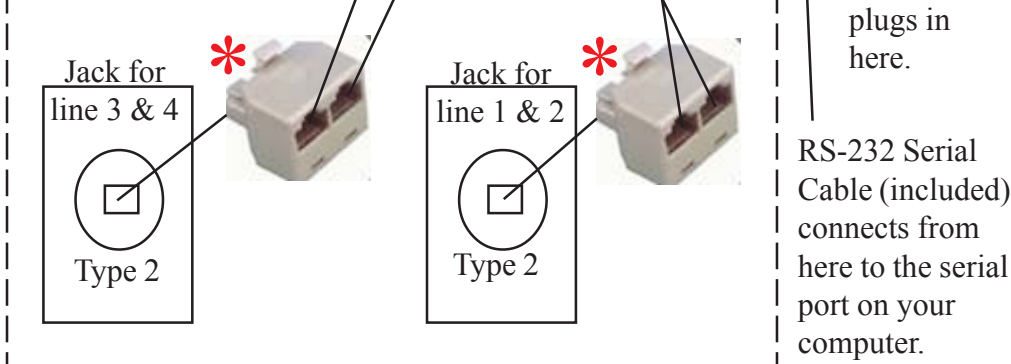

If the front of your Caller ID box looks like this:

...and if you have ONE LINE per phone jack:

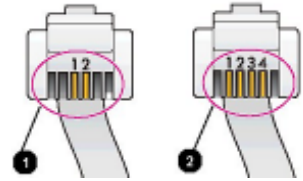

...and if you have TWO LINES per phone jack:

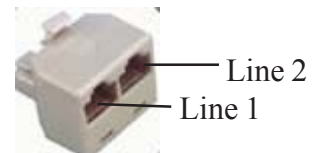

Phone Line Types

Type 1 Type 2

All wires are designated with a type 1 or type 2 referring to the number of lines the wire can handle. Type 1 can handle one line, type 2 can handle two lines.

Phone Line Splitter

* NOTE: This splitter is optional and is therefore not included in with your Caller ID system. This splitter divides a 2-line jack into line 1 on the left port and line 2 on the right port. It does NOT split the phone lines into line 1&2 in the left port and line 1 & 2 in the right port. It is recommended that a splitter similar to this be purchased to split the lines for compatibility with the Caller ID box.
